Although psychology has traditionally been dominated by quantitative, “objective,” deductive methodologies, qualitative and mixed methodological approaches are now gaining popularity as the discipline recognizes how these methods can be used to contribute to more contextualized understandings of complex psychological phenomena. Particularly when research aims to explore ongoing processes or concepts with multiple contested meanings that change in relation to sociohistorical and relational contexts (e.g. race, gender, ethnicity), results from qualitative methods can not only help researchers create better quantitative approaches, but are also unique contributors to our overall understanding.

This course introduces students to qualitative methods used in psychological research. It begins by discussing the philosophies and foundations of qualitative methodology and the ways in which qualitative and quantitative methods are similar, different, and complementary. We will focus on grounded theory and phenomenology as we learn about data collection and analysis by engaging in a qualitative group project as well as briefly survey some of the qualitative methodologies and analysis approaches used in the field.

Course Objectives

• To understand the foundations and philosophies of qualitative methodologies in psychology and their place in psychological research.
• To become a critical consumer of qualitative research through this understanding.
• To develop skills in qualitative research methods—particularly those related to grounded theory methodology—specifically data collection and analysis methods including individual interviewing, transcribing, and data analysis (coding and categorizing)

Required Texts:

PLUS: Readings on Reserve in library

Course Requirements

Course Participation (50%) Participation involves reading and thinking about the assignments before class. If any questions arise while you are doing the reading, I would appreciate an email by 10am the day before the reading is due. You are not required to send me an email; this suggestion is not meant to make more work for you. But if you have a particular question that arises, this gives me a little bit of time to look up anything needed or bring additional resources to answer the question.

Class participation also involves active, thoughtful participation and timely completion of all aspects of the shared research project. Thus, completing the interviews, bringing in your transcriptions, participating in data analysis assignments, etc. will all be reflected in your participation grade.
**Research process journal (15%):**

The journal is a place to record impressions, questions, insights, and concerns, both about the actual research findings and analysis and also about your own experiences as a researcher and student. Your journal should help you make sense of what you are doing/learning in this research. Some parts of your journal may be very personal and private (if they are really private and you don't want me to read that part, just mark it to let me know). Other parts may serve as initial ideas on analysis that you may want to share and get feedback about. In qualitative research, the researcher's own journals and reflections are an important part of the data and process. It is really important to be disciplined and faithful in using your journals every week. You should develop a regular time to write in your journals, such as the night before class, in addition to any spontaneous writing you might do during the rest of the week.

Here are some questions that might help start your writing throughout the semester, in addition to free writing about your experiences and the research process:

- What connections do you see between the research and your own experience?
- How are your thoughts and feelings about the research changing? How are you changing in response to the research experience?
- What seems important to learn from the data? What impresses or surprises you? What additional questions are coming to you?
- How do you feel about the way we are working together as a team? How can we improve?
- What are your next steps or things to think about for the coming week?

Your journals will be checked but not graded.

**Interviews and data analysis (ungraded)** You will complete two interviews, transcribe at least one of these, and participate in the data analysis of the class projects. These are ungraded assignments, but their thorough completion is reflected in your Class Participation grade.

**Write-up of research results (25%):** Although we will work on the research project together, each of you will be independently responsible for writing up the methods and the results of the project, including a description of the method, a rationale for the type of method used, and the theory and results that emerge from the research.

**Presentation of a Research Question and Qualitative Method Approach (10%)** In order to consider how qualitative methods might connect to the research you are doing and the area in which you are interested, you will prepare and present a research question and appropriate qualitative methodology in your area. Please note that we WILL be meeting during finals week for these presentations.

**Resources and Support Services for Students with Disabilities at UMass**

If you have a disability and feel you will need accommodations in order to be successful in this course, please contact the Ross Center for Disability Services (M-1-401) at 287-7430. Please also let me know, as well.
### CLASS SCHEDULE (Subject to Revision)

**Abbreviations for readings:**
- **C:** Creswell
- **RM:** Richards and Morse
- **B:** Bazeley
- **JCP:** Special Issue: Journal of Counseling Psychology. 2005 Apr Vol 52(2) 224-235: Knowledge in Context: Qualitative Methods in Counseling Psychology Research. All articles available in full text through Healey library database (PsycArticles)
